

Artyom Tuzov

3rd Year DSAI Student | Building Robotics Solutions & Student Communities

- ✉ a.tuzov.work@mail.ru
- ☎ +79872201639
- 📍 Republic of Tatarstan, Innopolis
- ✉ @artyomzifir
- 🐙 github.com/Artyom35689

Education

Innopolis University
Bachelor's degree • 4.8 GPA
Data Science and Artificial Intelligence (Robotics)
2023-2027

Skills

- 👁 OpenCV, YOLO, PyTorch, scikit-learn, NumPy, pandas
- Human detection, pose estimation, gesture recognition; training models from CNNs to Transformers; full ML pipeline from data to deployment
- 📦 ROS2, Docker, NVIDIA Jetson, Ubuntu
- Integrating CV models on the Unitree A1 quadruped robot; containerizing robotics applications
- { } Python, C++, Java, Git/GitHub/GitLab, CI/CD
- Library development, technical documentation, automated artifact builds on GitHub Pages, team development

Recommendation Letters

Letter from the Student & Alumni Relations Center, Innopolis University
Link

Letter from the Director of the Institute of Robotics and Computer Vision, A. Maloletov
Link

Letter from the instructor of the "Product Solutions Engineering" course, M. Gadzhimuradov
Link

3rd-year Innopolis University student, GPA 4.8. I combine technical projects with community building. Young && Yandex ambassador. Winner of the 2025 Russian Championship in industrial robotics programming, technical volunteer at the All-Russian School Olympiad in robotics, DJ and Studvesna 2024 prize-winner. I work with ROS2, computer vision, and machine learning.

Technical Experience

Chestnut Map Yandex Cloud
December 2025 - Present

- Built a self-hosted Telegram WebApp prototype for geotagged chestnut collection with a photo-first finalize flow and owner-only CRUD.
- Containerized the stack with Docker Compose and implemented MinIO-backed compressed image storage with thumbnails plus a MapLibre map UI.
- Scaled rendering to 40k+ points using PostGIS MVT tiles with score filters and integrated ConvNeXt scoring via async inference

Robotic Assembly Inspection on Promobot Manipulator December 2025 - February 2026

- Trained a YOLO-based detector to verify PCB component presence and placement from an end-effector camera on a Promobot arm.
- Built and labeled a custom dataset of ~300 PCB photos and trained the model for multi-class component detection.
- Integrated the detector into a ROS 2 Humble inspection pipeline that combined rust recognition and gear and tooth counting to output pass or fail and reject defective assemblies.

1st place at the Russian Championship in robotics programming December 2025

- Winner of the Russian Championship in sport programming for industrial robotics
- Final: 5 applied automation tasks on Promobot industrial manipulators
- Scale: qualifiers — 44 teams; finals — 13 teams from 8 regions of Russia

CV model integration for the Unitree A1 robot dog September 2025 - January 2025

- Integrating human detection, pose estimation, and gesture recognition models to control a quadruped robot
- Working on ROS2 node configuration and model integration
- Stack: ROS2, Docker, NVIDIA Jetson Xavier NX, OpenCV, Python

Development of a "smart tank" for agro-drones June 2025 - August 2025

- Together with the team, built a prototype sensor for monitoring liquid consumption and automatic fertilizer dosing for unmanned agricultural drones
- The built-in float sensor tracks liquid level in real time
- Project supervised by Alexander Maloletov (Director of the Institute of Robotics and Computer Vision, Innopolis University)
- Part of the federal project "Workforce for Unmanned Aviation Systems" (76 teams from 16 regions of Russia)

Development of a plug-n-play inverted pendulum system June 2025 - July 2025

- Developed firmware and a Python library to simplify control of an inverted pendulum system (a teaching stand for control and robotics courses)
- Wrote technical documentation and set up automated artifact builds on GitHub Pages
- Coordinated the team's work and ensured reproducibility of results

Machine Learning & Computer Vision Courses 2024-2025

- "Applied Machine and Deep Learning Technologies": full MLOps cycle, modern NLP/CV architectures, generative models
- "Introduction to Computer Vision": classical methods (filtering, feature detection, Hough transform) and deep learning (GAN, YOLO)
- "Machine Learning": fundamentals from K-NN and Naive Bayes to CNNs, gradient descent, PCA
- "Training. ML Run": ML for robotics and an introduction to Reinforcement Learning

Community Leadership & Volunteering

Young && Yandex (Y&&Y) Ambassador

October 2025 - Present

- Selected in the top 60 out of 7,000+ applications for the ambassador role in Yandex’s youth track
- Completed training in Moscow on brand promotion, event management, and working with a youth audience
- Developing an event strategy to promote internships, hackathons, and educational programs among Innopolis University students
- Aiming to build an active community around Y&&Y and help students find growth opportunities at Yandex

Personal Blog

July 2023 - Present

- I publicly document my journey: projects, achievements, failures, reflections on tech and life
- 160+ subscribers over 1.5+ years of organic growth
- Goal: practice public reflection, build personal brand and visibility, and learn to express thoughts honestly and without filters
- The blog helps me make sense of my experience and share lessons with the community

Student Club Head

January 2024 - September 2025

- Grew a video games club to 200+ active members; organized regular tournaments, talks, and game nights
- Kept the club in the university’s top-10 for engagement for 1.5 years in a row
- In 2025, successfully handed over leadership to the next generation to scale further
- <https://t.me/InnTendo>

Technical Volunteer — All-Russian School Olympiad (Robotics)

Regional and national stages
February, April 2025

- Assembly, debugging, and rapid repair of ~100 robots for the All-Russian School Olympiad finals
- Provided real-time technical support on site

Buddy / Tutor / TA in onboarding programs

2023-2025

- Buddy (InnoBootCamp 2024): supported freshmen during the summer onboarding program and helped them adapt to university life
- Tutor (Tutorship Program 2024, 2025): mentored newcomers throughout the first semester (academic and social support)
- Academic Tutor (2023): helped students prepare for exams and master challenging topics
- Teacher Assistant (2025): taught English classes in the preparatory course

Achievements

Slippers of the Year 2025 Nominee

Innopolis University

June 2025

A traditional ceremony celebrating students for unique contributions to campus life. Nominated for a distinctive path in searching for opportunities and bold attempts to participate in grant competitions — "In Search of El Dorado of the Year"

Student of the Year 2025

Innopolis University

January 2025

Social activity award for contribution to student community development, volunteering, and mentoring.

Studvesna 2024 Prize Winner

Studvesna

Spring 2024

Russia’s largest student festival. Won a prize in the DJing category, demonstrating audience engagement skills and a creative approach to musical performance.
