Letter of Recommendation

Dear Members of the Admissions Committee,

I am pleased to recommend Artem Tuzov for admission to a Master's programme in Robotics, Computer Vision, Machine Learning, or a related field.

I am Alexander Maloletov, Full Professor and Director of the Institute of Robotics and Computer Vision at Innopolis University. I have known Artem through my teaching activities and his involvement in robotics projects associated with our Institute.

Artem is completing his Bachelor's degree with a GPA of 4.83/5.0. I personally taught him Theoretical Mechanics and Fundamentals of Robotics, in both of which he received the highest grade. His performance demonstrated a strong grasp of fundamental principles and an ability to apply theoretical knowledge to engineering problems.

Artem has actively contributed to several robotics projects. In LLM Swarm, a multi-robot coordination system integrating ROS 2, multi-agent path finding, behavior trees, and large language models, he worked on higher-level coordination, LLM-assisted decision-making, and experimental evaluation. This project demonstrates his ability to address complex problems at the intersection of autonomous systems and artificial intelligence.

I am also familiar with his work on the Unitree A1 quadruped robot, involving computer vision, human pose estimation, and deployment on NVIDIA Jetson hardware, as well as a PCB inspection system using deep-learning-based component detection and geometric measurements. These projects reflect his practical expertise in machine learning and robotic system integration.

Beyond technical work, Artem is a co-founder of the Innopolis Robotics Society, where he has supported educational workshops, engineering projects, and student engagement in robotics. His achievements also include a first-place team result at the Russian Championship in Robotics Programming in 2025.

What I particularly value in Artem is his ability to connect theoretical knowledge with practical implementation and work across multiple engineering disciplines. His academic preparation, technical experience, and initiative provide a strong foundation for graduate-level research.

I strongly recommend Artem Tuzov for admission to your Master's programme. I believe he has the skills and potential to succeed in a demanding academic environment and contribute meaningfully to research in intelligent robotic systems.

Sincerely,

Prof. Alexander V. Maloletov, D.Sc.
Full Professor,
Director, Institute of Robotics and Computer Vision,
Innopolis University
