Recommendation Letter

I am pleased to recommend Artyom Tuzov as a capable and promising specialist in robotics and intelligent control systems.

I am a Senior Lecturer at Innopolis University and a Lead Development Engineer at the Sber Robotics Center. I taught Artyom three courses: Mechatronics, Automatic Control Theory, and Sensorics. This gave me the opportunity to assess his technical knowledge, engineering skills, and approach to solving complex problems.

Throughout all three courses, Artyom consistently demonstrated strong academic performance, independence, and genuine interest in the subjects. He successfully handled assigned tasks, independently investigated technical challenges, and sought to understand not only how particular methods work but also the fundamental principles behind them. I particularly appreciated his curiosity, systematic approach to problem-solving, and ability to connect theoretical concepts with practical applications. Based on these qualities, I consider Artyom one of the strongest students I have taught.

His academic background is further supported by practical experience in robotics software development. Artyom has worked on projects involving computer vision, navigation and control algorithms, integration of machine learning models into ROS2-based systems, and computational optimization for embedded platforms. This experience demonstrates his ability to address complex engineering problems requiring an understanding of both software and hardware aspects of robotics. His practical skills are further evidenced by his first-place achievement at the Russian Robotics Programming Championship in 2025.

As both an educator and a practicing robotics engineer, I particularly value Artyom's independence, analytical thinking, and willingness to explore unfamiliar technical areas. He approaches his work responsibly, demonstrates strong problem-solving skills, and has a solid foundation for further professional development.

I consider Artyom a well-prepared and motivated candidate and confidently recommend him for further academic or professional opportunities in robotics.

Sincerely,

Valeria Skvortsova
Senior Lecturer, Innopolis University
Lead Development Engineer, Sber Robotics Center
